Happy Aloha Friday A&R Branch,

I am really excited to share some great news!

We have three fantastic new folks joining our Branch! With their skills and expertise, we will finally be able to tackle some key projects that have been on hold.

- **Leonardo Maia Durante** has worked on fisheries in Australia, New Zealand, and Hawai‘i, with a strong background in recreational and commercial fisheries data. He will join ISAP, work on reef fish assessments, and collaborate closely with Hawai‘i’s Division of Aquatic Resources (DAR). He starts March 10th and will be in the cubicle right in front of Hongguang’s office.
- **John Wiley** has extensive experience in fisheries biology and life history research in the Pacific Islands region. He has worked closely with local fishing communities and agencies, and he will be focusing on reef fish biology with Eva and the Life History Program while also teaming up with Leo and DAR. John starts Monday, February 3rd, and will be in the cubicle across from Jenny Suter. We will be officially welcoming him on **Wednesday from 9-10 AM in Room 2292** (hope to see you there)!
- **Janelle Morano** is a quantitative fisheries ecologist finishing up her Ph.D. from Cornell. Her background is in spatial modeling and ecosystem dynamics, and she will dive into data exploration and assessment feasibility for secondary pelagic species (ono, mahimahi, opah, and monchong). Janelle will be joining OSAP and will start on August 4th.

We are super happy to have them on board, and I know they will be a great fit!
Have an epic weekend!
Best,
Felipe
