February 13, 2025

Prohibited Use of DeepSeek Artificial Intelligence (AI)

In an effort to protect the confidentiality, availability and integrity of Department of Commerce (DOC) information systems and data, the deployment and use of the DeepSeek artificial intelligence (AI) platform has been prohibited by the DOC Chief Information Officer. NOAA has been instructed to take the following actions by close of business on Friday, February 14, 2025.

1. Identify the use or presence of the DeepSeek AI platform on NOAA information systems/endpoints.
2. Remove and block the installation of the DeepSeek client on NOAA information systems/endpoints.
3. Prohibit internet traffic from NOAA information systems/endpoint to DeepSeek AI platform.
4. Provide an attestation memo for the DOC CIO that attests to the fact NOAA has taken the actions listed above by COB on February 14, 2025.

The NOAA Office of the Chief Information Officer (OCIO) staff have already begun to take steps 1 through 3 and will complete all actions prior to the February 14 deadline. OCIO staff have identified mobile devices that are not in compliance. DeepSeek will be removed from the identified devices via NOAA's mobile device management (MDM) platform. To prevent the installation of DeepSeek on mobile devices, the MDM platform will be configured to prohibit

the installation moving forward. The NOAA Security Operations Center (SOC) will be configuring the Trusted Internet Connection Access Point (TICAP) internet gateways to block all traffic to DeepSeek from NOAA information systems. If you have any questions or concerns with the required actions please contact William Rogers at william.g.rogers@noaa.gov.

Please note, the NOAA Generative AI Guidelines released on October 1, 2024 remain in place.

Regards,

Zachary G. Goldstein
Chief Information Officer and Director, High Performance Computing and Communications
National Oceanic and Atmospheric Administration
