Aloha A&R Branch,

I hope you all enjoyed the long weekend!

This past Saturday, January 18, marked the completion of our first 60-day detail rotation in the Oceanic Fisheries Stock Assessment Program (OSAP) and the Island Fisheries Stock Assessment Program (ISAP). We will begin the second rotation this week.

A big mahalo to Hongguang Ma and Michelle Sculley for their leadership in ISAP and OSAP, respectively. Michelle has significantly enhanced our NPFC roles, collaborating closely with Erin Bohaboy and Jon Brodziak, and initiating monthly RFMO leads catch-ups to boost our collaboration across RFMOs. Thank you, Michelle! Hongguang has led crucial domestic stock assessments, including collaborations with the State of Hawai'i to estimate non-commercial catches of bottomfish, and developing strategies for Kona crab fisheries assessment in the Main Hawaiian Islands. Thank you, Hongguang!

This week, we welcome John Syslo and Nicholas Ducharme-Barth to their new roles. John will assist with the upcoming Western Pacific Stock Assessment Review (WPSAR) for the CNMI Bottomfish update, led by Erin and Toby, and will continue supporting the Life History and Fisheries-Independent Survey Programs with the Marianas FY25 cruise.

Nico will continue enhancing our RFMO strategies and lead open science training efforts. He will also, alongside MSE scientist Rob Ahrens, develop a research plan focusing on Opah, Ono, Monchong, and Mahi-mahi. A new CIMAR Assessment Researcher will soon lead this project.

Mahalo nui,
Felipe
